1025E MILD CARBON STEEL

BORON INFUSED STEEL

CHROMOLY

PRECISION DISTANCE CONTROL

JPX919 TOUR/1025E PURE SELECT MILD CARBON STEEL

A more compact, streamlined evolution of Mizuno's standout tour iron of 2017/18, re-establishing Mizuno as the iron of choice on Tour. The JPX919 Tour is surprisingly stable for its size, demonstrated in its tight distance patterns from off center strikes – the critical benchmark for elite level shotmakers. Grain Flow Forged HD (High Density) from a single billet of 1025E Pure Select mild carbon steel in Hiroshima Japan – for the softest, purest Mizuno feel yet.

> "The 919 Tour's compact profile doesn't tell the whole story – there's a surprising level of stability and distance control built into this geometry. Its predecessor attracted a new wave of younger tour players into Mizuno irons – making a big impact winning back to back US Opens and recording a course record 61 at St Andrews."
>
> Jeff Cook, PGA Tour Manager

JPX919 TOUR SPECIFICATION

	#3	#4	#5	#6	#7	#8	#9	PW*
Loft	21°	24°	27°	30°	34°	38°	42°	46°
Lie	59.5°	60.0°	60.5°	61.0°	61.5°	62.0°	62.5°	63.0°
Length	39.00"	38.50"	38.00"	37.50"	37.00"	36.50"	36.00"	35.50"

Dexterity: RH only

ELITE SHOTMAKERS PROFILE: Compact and lean over the ball, the JPX919 Tour is designed to satisfy the needs of the game's elite shotmakers.

STABILITY FRAME: Open at the heel portion to enhance stability and launch, whilst producing a tour-preferred vibration/sound.

TOUR GRIND TOP EDGE: Narrowed to match grinds commonly requested on Tour. Reduced to 4.6mm on 7 iron (10% measured shrinkage in CAD data).

FRACTIONAL SOLE WIDTH INCREASE: In balance with reduction of top edge creates easier launching long irons (5% measured increase in CAD data).

PEARL BRUSH: Chrome plating with a new, more durable pearl finish to soften the 919's precise lines in high sunlight.

GRAIN FLOW FORGED HD (HIGH DENSITY): From a single billet of 1025E mild carbon steel in Hiroshima Japan for unmistakable Mizuno feel through impact.

CUSTOM AVAILABILITY: Built to your desired specification as part of a full, split or short set. No upcharges for grips / shafts within the Mizuno Custom Program.

PERFORMANCE BALL SPEEDS

JPX919 FORGED / BORON INFUSED STEEL

With a new back milled clubface, the JPX919 Forged is Mizuno's fastest ever forging in measured ball speed. Balanced with Mizuno's trademark workability and elevated Grain Flow Forged HD feedback - the JPX919 Forged is also Mizuno's most versatile iron. In the hands of a tour player searching for a distance equalizer, or an amateur wanting feedback to evolve their game - the streamlined JPX919 Forged delivers on every level.

> A deeper, wider milling across the back of the face makes the JPX919 Forged able to transfer more energy to the ball than any previous Grain Flow Forged irons. None of that would have been possible without that small addition of boron into our steel billets – which gives that additional strength needed to reinforce the face.

David Llewellyn, Director of Golf R&D

JPX919 FORGED SPECIFICATION

	#4	#5	#6	#7	#8	#9	PW	GW
Loft	22°	25°	28°	32°	36°	41°	46°	51°
Lie	60.0°	60.5°	61.0°	61.5°	62.0°	62.5°	63.0°	63.0°
Length	38.50"	38.00"	37.50"	37.00"	36.50"	36.00"	35.50"	35.25"

Dexterity: RH and LH

BACK MILLED FACE: CNC milled from the sole up, the JPX919 Forged boasts a larger area of minimum face thickness for consistently increased ball speeds. Weight removed from face also allows a lower, deeper center of gravity for more easily flighted long & mid irons.

BALANCED PERFORMANCE: The ultimate balance of ball speed, stability and feedback within a more refined playing profile.

A SMALL ADDITION OF BORON: Just a trace of Boron makes our steel billet 30% stronger, allowing greater design possibilities in a forged head.

STABILITY FRAME: Open at the heel portion to enhance stability, launch and loft appropriate flight apex for soft landing approach shots.

PEARL BRUSH: Chrome plating with a new, more durable pearl finish to soften the 919's precise lines in high sunlight.

GRAIN FLOW FORGED HD (HIGH DENSITY): From a single billet of 1025 Boron mild carbon steel in Hiroshima Japan for unmistakable Mizuno feel through impact.

SPEED & CONTROL

JPX919 HOT METAL / CHROMOLY 4140M

A benchmark in iron design - the JPX919 Hot Metal combines an incredible balance of launch speed and soft, controllable landing angles. The use of a high strength Chromoly 4140M and seamless cup face construction produces the highest ball speed from any Mizuno iron. Mizuno's new stability frame ensures that each iron within the set produces the correct flight apex – with landing angles steep enough to control shots into the green.

> "The most impressive thing about the JPX919 Hot Metal is the launch control and flight apex – the extra ball speed and distance doesn't come from low flying bullets. We work the design backwards from the correct landing angles. These are irons for the golf course, not just the launch monitor."

Chris Voshall, Senior Engineer

JPX919 HOT METAL SPECIFICATION

	#4	#5	#6	#7	#8	#9	PW	GW	SW	LW
Loft	20°	23°	26°	30°	35°	40°	45°	50°	55°	60°
Lie	60.0°	60.5°	61.0°	61.5°	62.0°	62.5°	63.0°	63.0°	63.0°	63.0°
Length	38.50"	38.00"	37.50"	37.00"	36.50"	36.00"	35.50"	35.25"	35.25"	35.25"

Dexterity: RH and LH

CHROMOLY 4140M: Highly resilient material allows new multi-thickness face for astonishing ball speed and feel.

SEAMLESS CONSTRUCTION: A one piece cupped geometry produces a surprising level of feedback at high ball speeds.

STABILITY FRAME: Open at the heel portion to enhance stability, launch and loft appropriate flight apex for soft landing approach shots.

RE-ENGINEERED SOUND RIBS: Developed to hit specific vibration patterns identified as delivering a satisfying sensation through impact.

PEARL BRUSH: Chrome plating with a new, more durable pearl finish to soften the 919's precise lines in high sunlight.

MODIFIED SCORING IRONS: A steeper transition into more compact scoring irons and wedges.

X30 STEEL WEDGES WITH MILLED GROOVES: Set matching Gap, Sand and Lob wedges use a softer material with tour precision milled grooves and face for improved spin and control around the greens.

THE CRAFTSMAN'S MUSCLE BACK

MP-18

Sculpted by our YORO master craftsmen, the MP-18 is a throwback to the muscle backs of Mizuno's past. A shorter blade length, cambered top line and steep progression into sharp, compact wedges are the marks of our master clubmakers - who honed their skills on the irons of major winners. Grain Flow Forged in Hiroshima Japan for the most colourful feedback imaginable.

"You can sense Turbo's signature on the MP-18s - they remind me of the blades we worked on together all those years ago."

- Nick Faldo, Six-time Major winner

"We significantly shifted the balance of science and art with the MP-18's. You can instantly notice a greater input from the master craftsmen in that the MP-18 is more like the blades that made Mizuno famous – just more precise in its flow and manufacturing. At impact, this is just about perfection."

Chris Voshall - Senior Club Engineer.

MP-18 IRON SPECIFICATION

	#3	#4	#5	#6	#7	#8	#9	PW*
Loft	21°	24°	27°	30°	34°	38°	42°	46°
Lie	59.5°	60°	60.5°	61°	61.5°	62°	62.5°	63°
Length	38.75"	38 25"	37.75"	37.25"	36.75"	36.25"	35.75"	35.50"

* RH only 3-PW

MASTER MOLDS FINISHED BY OUR YORO CRAFTSMEN: Mizuno's most experienced, skilled craftsmen put their finishing grinds and touches to every iron from 3-PW.

HIGH DENSITY (HD) FEEL: Our evolved Grain Flow Forged HD process concentrates the grain in our 1025E Pure Select mild carbon steel billets more tightly for incredible, precise feedback.

MAJOR WINNING DNA: A shorter blade length and low heel profile influenced by our catalog of major winning irons.

ULTRA-THIN TOPLINE: A narrow topline has an additional camber for further refinement.

SMALLER PITCHING WEDGE: Sharper, more refined short irons into the pitching wedge – influenced by our YORO master craftsmen.

FORGED IN HIROSHIMA JAPAN AT MIZUNO'S EXCLUSIVE PLANT: Manufacturer of Grain Flow Forged heads for Mizuno for over 30 years. Grain Flow Forged from a single billet for incredible feel and distance control.

FLOWS INTO ANY MP-18 SPLIT SET: The MP-18, MP-18 SC and MP-18 MMC flow together within a custom built, mixed set.

THE PLAYER'S CAVITY BACK

MP-18 SC

A compact cavity back – sensitively reworked by the same master craftsmen who created multiple major winning iron sets. A slightly wider, cambered sole makes this more playable than the muscle back. Though the thin, tapered top line, short head length and smaller wedges mean this is very much a tour-ready iron. Grain Flow Forged in Hiroshima for the most colourful feedback through impact.

> The MP-18 SC is an iron that combines a lot of practical needs – stability, workability and softness at impact with our craftsmen's desire for immaculate looks over the ball. Although the sole is a little wider than the muscle back, from every playing position, the two models blend beautifully as a mixed set. The MP-18 SC wedge doesn't taper off as dramatically in size as the muscle back - so between the two models, better players will find something that suits their eye.
>
> Chris Voshall - Senior Club Engineer.

MP-18 SC IRON SPECIFICATION

	#3	#4	#5	#6	#7	#8	#9	PW*
Loft	21°	24°	27°	30°	34°	38°	42°	46°
Lie	59.5°	60°	60.5°	61°	61.5°	62°	62.5°	63°
Length	38.75"	38.25"	37.75"	37.25"	36.75"	36.25"	35.75"	35.50"

* RH & LH / 3-PW

MASTER MOLDS FINISHED BY OUR YORO CRAFTSMEN: Mizuno's most experienced, skilled craftsmen put their finishing grinds and touches to every iron from 3-PW.

HIGH DENSITY (HD) FEEL: Our evolved Grain Flow Forged HD process concentrates the grain in our 1025E Pure Select mild carbon steel billets more tightly for incredible, precise feedback.

PLAYERS COMPACT PROFILE: Just 0.5mm taller than our MP-18 blade, with our YORO signature low heel design.

ULTRA-THIN TOPLINE: Just 1mm thicker than the MP-18 muscleback, with an additional refining camber.

SMALLER PITCHING WEDGE: Sharper, more refined short irons into the pitching wedge – influenced by our YORO master craftsmen.

FORGED IN HIROSHIMA JAPAN AT MIZUNO'S EXCLUSIVE PLANT: Manufacturer of Grain Flow Forged heads for Mizuno for over 30 years. Grain Flow Forged from a single billet for incredible feel and distance control.

FLOWS INTO ANY MP-18 SPLIT SET: The MP-18, MP-18 SC and MP-18 MMC flow together within a custom built, mixed set.

MULTI-MATERIAL CONSTRUCTION

MP-18 MMC

A three-year project lead by our YORO master craftsmen to develop a highly stable, forgiving multi-metal construction iron - which satisfied their aesthetic demands at address. Even with both lightweight Titanium and heavier Tungsten parts sealed within its 1025E mild carbon steel head, the MP-18 MMC maintains a similar 'tour ready' profile and size to the MP-18 SC.

> The MP-18 MMC is the first multi-material MP iron built in the vision of our master clubmakers - which set standards for looks and aesthetics that this kind of multi-metal construction typically prohibits. It extended our normal two-year development cycle by a full year - but raising the bar that little bit higher delivered a landmark iron.

Chris Voshall - Senior Club Engineer.

MP-18 MMC IRON SPECIFICATION

	#4	#5	#6	#7	#8	#9	PW*
Loft	22°	25°	28°	32°	36°	41°	46°
Lie	60°	60.5°	61°	61.5°	62°	62.5°	63°
Length	38.25"	37.75"	37.25"	36.75"	36.25"	35.75"	35.50"

RH only / 4-PW

MULTI-METAL STABILITY DESIGN: Use of both lightweight Titanium (8g) and heavier Tungsten (20g) for surprising off center performance.

MASTER MOLDS FINISHED BY OUR YORO CRAFTSMEN: Mizuno's most experienced, skilled craftsmen put their finishing grinds and touches to every iron from 4-PW.

HIGH DENSITY (HD) FEEL: Our evolved Grain Flow Forged HD process concentrates the grain in our 1025E Pure Select mild carbon steel billets more tightly for incredible, precise feedback.

PLAYERS COMPACT PROFILE: Similar in size to the MP-18 SC, with the added forgiveness of multi-material construction.

DUAL METAL SHORT IRONS: Absence of Tungsten toe weight keeps the short irons more workable.

FORGED IN HIROSHIMA JAPAN AT MIZUNO'S EXCLUSIVE PLANT: Manufacturer of Grain Forged heads for Mizuno for over 30 years. Grain Flow Forged from a single billet for incredible feel and distance control.

FLOWS INTO ANY MP-18 SPLIT SET: Offset has been calculated to flow into a mixed set with either MP-18 and MP-18 SC – once lofts have been weakened to match either set.

THE PLAYERS LONG IRON

MP-18 MMC FLI-HI

The finishing touch to an MP-18 set - the long iron replacement now used by every Mizuno tour player. A higher flying option with steeper landing angles, engineered with a profile acceptable to our YORO master clubmakers. The sleek new profile now envelopes a Maraging steel face, Tungsten toe weight and internal pocket for enhanced ball speed and ease of use.

> The Fli-Hi is very much a fixture on tour now - even the most classically minded players have converted to the #2 and #3 iron replacements. These are worlds away from heavily offset 'game improvement' hybrids - but much easier than a traditional long iron to flight and land in firm conditions.

Chris Voshall - Senior Club Engineer.

MP-18 MMC FLI-HI IRON SPECIFICATION

	#2	#3	#4	#5	#6*
Loft	16.5°	19°	22°	25°	28°
Lie	59°	59.5°	60°	60.5°	61°
Length	39.25"	38.75"	38.25"	37.75"	37.25"

RH only / 2-6 iron

MULTI-METAL STABILITY DESIGN: Lightweight Maraging steel face and Tungsten toe weight (20g) for a high, stable ball flight.

MASTER MOLDS FINISHED BY OUR YORO CRAFTSMEN: Mizuno's most experienced, skilled craftsmen put their finishing grinds and touches to every iron head.

PLAYERS COMPACT PROFILE: Just 1mm thicker topline than the corresponding MP-18 muscle back.

FLOWS INTO ANY MP-18 SPLIT SET: Calculated to flow into any MP-18 iron model.

FLAT OUT FURTHER

ST180 DRIVER

Mizuno's Wave sole commits every available gram of weight low, towards the face - dropping spin rates for even the fastest, downward ball strikers. Our first Wave sole in a driver also allows the ST180 to contract and expand on impact – increasing energy imparted to the ball. With a new Forged SP700 Ti Face the ST180 accelerates ball speeds noticeably past its predecessors.

> This was the biggest shock we've had in testing. The spin rate and ball speed of this driver caught everybody out. The ST180 comes off so fast, with so little spin – it's going to make a lot of good players question what they really need in a driver.

Jeff Cook / PGA Tour Manager.

ST180 DRIVER SPECIFICATION

	Standard	High (RH only)
Loft Range	7.5-11.5°	10.5-14.5°
Length	45"	45"

Availability: Right and left handed
Grip: M31 360

AMPLIFIED WAVE SOLEPLATE: Originally engineered in our fairway woods, the Wave Technology contracts / expands on for elevated ball speed, while pushing weight forward for vastly reduced spin rates.

EFFICIENT LOW SPIN DESIGN: An Internal Waffle Crown saves weight to be reallocated low and forward.

FORGED SP700 TI FACE: Allows a precise multi-thickness face for accelerated ball speeds.

NEW SHAFT OPTIONS: Expanded line of high-end shafts fitted without additional charge.

QUICK SWITCH ADJUSTABLE HOSEL: Allows 4 degrees of loft adjustment and 3 degrees of lie adjustment to match your unique launch and visual preference.

FLAT OUT FURTHER

ST180 FW

Our hugely amplified Wave sole commits every available gram of weight low, towards the face - dropping spin rates for even the fastest, downward ball strikers. The Wave sole also allows the ST180 to contract and expand on impact – increasing energy imparted to the ball. The flatter, more efficient flight keeps the faster, high energy 1770 Maraging Steel face under full control.

> If you like a wider, larger looking profile – but don't necessarily want a high spinning flight, the ST180 is a really interesting option. Over the years a lot of our tour players have bucked the trend for smaller fairway woods and this plays nicely into their hands.

Jeff Cook / PGA Tour Manager.

ST180 FAIRWAY WOOD SPECIFICATION

	#3	#5
Loft Range	15 (13-17)°	18 (16-20)°
Length	42.75"	42.25"

Availability: Right, left hand available in #3 only
Grip: M31 360

AMPLIFIED WAVE SOLEPLATE: A huge first wave expands on impact for elevated ball speed, while pushing weight forward for vastly reduced spin rates.

EFFICIENT LOW SPIN DESIGN: An Internal Waffle Crown saves weight to be reallocated low and forward.

FASTER 1770 MARAGING STEEL FACE: A thinner, more responsive face for increased ball speeds.

LARGE, ENCOURAGING FOOTPRINT: A larger than average profile looks forgiving – and it is.

NEW SHAFT OPTIONS: Expanded line of high-end shafts fitted without additional charge.

QUICK SWITCH ADJUSTABLE HOSEL: Allows 4 degrees of loft adjustment and 3 degrees of lie adjustment to match your unique launch and visual preference.

MORE BALL SPEED. MORE POSSIBILITIES.

GT180 DRIVER

The new GT180 is the ultimate fine tunable driver with the dual ability to squeeze every last yard from your drives and evolve with your swing. Built on a platform of faster than ever ball speeds the GT180 boasts an expanded range of draw, neutral and fade settings in low, mid and high spin flights.

Set the GT180 up to make the very most of the swing you have. Then tweak over the season to keep pace with your swing changes and conditions.

> "With its wider range of settings, the GT180 can hold the key to squeeze out those last few seemingly unobtainable yards. Being able to fine tune your launch angle and spin rate is the final element in the equation to find your most efficient flight."
>
> Bill Price / Custom Fitting Manager.

GT180 DRIVER SPECIFICATION

Loft Range	7.5-11.5°
Length	45"

Availability: Right hand
Grip: M31 360

FORGED SP700 TI FACE: Allows a precise multi-thickness face for accelerated ball speeds.

FINE TUNE YOUR BALL FLIGHT: Twin moveable 7g weights have a wider span of locations for impact on spin rates and fade/draw bias.

QUICK SWITCH ADJUSTABLE HOSEL: Allows 4 degrees of loft adjustment and 3 degrees of lie adjustment to match your unique launch and visual preference.

NEW SHAFT OPTIONS: Expanded line of high-end shafts fitted without additional charge.

PRECISE LOFT AND LIE CUSTOMISATION: Quick Switch adapter offers eight different locations.

A NEW LAW OF GRAVITY

GT180 FW

The ultimate customizable fairway wood – with ability to vastly reduce or increase spin rates as the situation dictates. An evolution of both the Mizuno Wave sole and sliding weight – reduces the lower end of spin rates for a more efficient trajectory at higher ball speeds.

Also available in a TS (tour style) more compact, lower lofted head.

> We've managed to significantly reduce the lower end range of spin rates but kept the overall range of adjustability. Players at the faster end of swing speeds are going to see a much flatter trajectory – but have the possibility of increasing their spin should the conditions dictate.

Bill Price / Custom Fitting Manager.

GT180 FAIRWAY WOOD SPECIFICATION

	#3	#3 TS
Loft Range	15 (13-17)°	14 (12-16)°
Length	42.75"	42.75"

Availability: Right hand
Grip: M31 360

AMPLIFIED FIRST WAVE: Pushes weight low and forwards for a flatter trajectory, in addition to creating more ball speed.

FASTER 1770 MARAGING STEEL FACE: A thinner, more responsive face for increased ball speeds.

17 GRAMS OF SLIDING WEIGHT: Creates a wider potential span of spin rates to fine tune your ball flight.

EFFICIENT LOW SPIN DESIGN: An Internal Waffle Crown saves weight to be reallocated low and forward.

NEW SHAFT OPTIONS: Expanded line of high-end shafts fitted without additional charge.

QUICK SWITCH ADJUSTABLE HOSEL: Allows 4 degrees of loft adjustment and 3 degrees of lie adjustment to match your unique launch and visual preference.

THE ADJUSTABLE HYBRID

CLK

With an eight-way adjustable hosel, the CLK hybrid can be precisely set to fill the distance gap between your longest iron and shortest fairway wood. Mid and slow swing speed players have the option of putting up to four CLK's in play - creating a wider distance span at the longer end of the bag.

> We all play our CLK's a little differently – with faster ball speeds, we'll tend to slot them in before a 3 or 4 iron. For mid and slow swing speeds 2, 3 or even 4 CLK's in the bag become a great way to maintain some yardage gaps.

Chris Voshall - Senior Club Engineer.

CLK SPECIFICATION

	#2	#3	#4	#5
Loft	16°	19°	22°	25°
Lie	56.5°	57°	57.5°	58°
Length	41"	40.5"	40"	39.5"

Right & Left Hand
(LH 3 & 4 only)

AMPLIFIED WAVE SOLE: Delivers more energy for faster ball speeds, while pushing weight lower and forward for a high, low spinning flight.

1770 MARAGING STEEL FACE: Ultra thin, durable face material for faster ball speeds and freedom to create a more stable clubhead.

VERSATILE PLAYING PROFILE: Sitting exactly between a long iron and fairway wood, the CLK is equally at home from the fairway or tee.

32 SET UP POSSIBILITIES: With four different heads, each with an 8-way adjustable hosel, there's a setup, flight and look to suit the most sensitive eye.

LOFT SPECIFIC DESIGN

S18 WEDGES

A mid-size, rounded profile, Grain Flow Forged in Hiroshima Japan for the ultimate in short game performance.In the higher lofts, weight shifted up the blade is visible in a thicker, bevelled topline - delivering more consistent spin rates on strikes from high in the clubface (common with more extreme lofts). Mizuno's most loft specialist wedge in every aspect (sole grind, profile, top line and groove depth) from the 46-degree pitching wedge replacement to the 62-degree lob wedge.

ROUNDED SILHOUETTE: Allows the blade to open without impacting alignment.

THICKER UPPER BLADE PORTION: A thicker top line on the most lofted options delivers spin consistency from high on the face.

LOFT SPECIFIC PERFORMANCE: Every loft has a unique profile, sole grind and groove depth to be most effective for their expected use.

LONGER LASTING GROOVES: The use of Boron infused steel lengthens the durability of Mizuno's Quad Cut Groove, while maintaining Mizuno's renowned Grain Flow Forged feel.

> "One of the keys to a good wedge game is controlling your spin rates - there's no gain in making one pitch stop dead if the next one rolls out. On the shorter shots, we're more likely to miss the sweet spot high on the face - which is a cause of inconsistent spin. The S18 is thicker higher into the blade, which evens out the spin rates on those common miss-hits."

Chris Voshall - Senior Club Engineer.

New Blue IP for 2018

Right Hand/Left Hand (Chrome Only)

PRECISE MILLED FACE AND GROOVES: A new milling tool means our tolerances are even tighter – taking our loft specific Quad Cut grooves even closer to the absolute USGA / R&A limitations.

BLACK IP OR WHITE SATIN: Black IP will wear away gently over time to reveal the durable chrome beneath.

NEW BLUE IP: Additional finish for 2018.

FULL CUSTOM OPTIONS: Shafts, grips and set up can be matched to your Mizuno custom irons, to maintain flow through the set – as recommended by our Fitting technicians.

CUSTOM STAMPED: Our assembly line can stamp your new wedge with up to 6 characters in one of 12 colours.

MIZUNO SWING DNA

FIND YOUR BEST MATCHED SHAFT WITH THE MIZUNO SHAFT OPTIMIZER.

MIZUNO BUILDS CUSTOM EQUIPMENT TO INDUSTRY LEADING PRECISION. OUR NETWORK OF PERFORMANCE CENTERS AND MIZUNO FITTERS WILL ASSIST IN LOCATING THE BEST MODEL AND SPECIFICATION FOR YOUR UNIQUE GOLFING NEEDS.

TAKE 3 SWINGS

Using the shaft optimizer. Strain gauges within the shaft record how you move the shaft. Golfers are generally surprised how consistent their 'good' and 'bad' swings are. Variation in the result is nearly always down to inconsistency of strike.

RANK EVERY SHAFT FOR SUITABILITY

Our Swing DNA software will rank every available iron shaft (based on their EI curves) as best to worst theoretical match against your swing profile. The new software shows every available shaft in order of suitability.

ENTER YOUR DATA INTO SWING DNA SOFTWARE

Your fitter will take data from your 3 swings of data and enter into the Swing DNA software. The software will align your unique DNA with a map of custom shafts independently measured and assessed by Mizuno.

TEST THE RECOMMENDATIONS

Your Swing DNA shaft selection is based on science. After hitting the recommended options your fitter will be able to show you real world distances and dispersion. You may decide to promote a lower ranked shaft based on feel and sound. You may even prefer a non optimal flight that suits your eye. You make the final decision.

WHAT DO WE MEASURE?

The Shaft Optimizer measures 5 elements of your swing. Club head speed alone doesn't dictate which shaft should be most effective for your swing.

1. **CLUBHEAD SPEED:** How fast the clubhead and shaft are moving during the swing.
2. **TEMPO:** How quickly the player transitions from the backswing to the downswing.
3. **SHAFT TOE DOWN:** A measure of the bowing of the shaft in a downward direction during the downswing.
4. **SHAFT KICK ANGLE:** The amount of shaft forward bending during the downswing motion.
5. **RELEASE FACTOR:** How and when the clubhead and shaft are releasing during the downswing motion.

PERSONALIZE YOUR WEDGE

Put an authentic tour touch to your Mizuno wedge with a custom stamp. You can add 6 characters (a space counts as a character) in any one of 12 different colours shown below. Each stamp is a unique mark – perfection in stamp depth and alignment is not an option.

STAMPING GUIDE

Each stamp is unique and will vary slightly in depth and positioning.

- Choose from 12 paint colour options.
- Only one paint colour per wedge.
- Mizuno reserves the right to refuse any requests deemed to be offensive.
- Custom wedge stamping is available through all official Mizuno stockists.
- Available on S18 wedges

ADDITIONAL INFORMATION

Lengths / Swingweights

- For most iron models Mizuno offer lighter weight heads which can be used to keep the swing weight to a standard balance for club lengths up to +1/2" longer. Anything longer than that and the swing weight will increase above the recommended balance. (As a rough calculation, every extra 1/2" in length will increase the swingweight by 3 balance points).
- Irons can be built from 1" shorter than standard up to a maximum of 2" longer than standard.
- Woods can be built +/- 1" from standard length but the swingweight will increase by 3 points for every +1/2" and reduce by 3 points for every -1/2".

Loft and Lie adjustment

- Mizuno irons can be adjusted to varying degrees depending on model and material type. In some cases, due to the softness of our forgings, "craftsman's" marks on the hosels may result from bending them to the required loft / lie.
- Any adjustment to loft will alter the bounce angle on the sole. Making the loft stronger will increase the offset and reduce the bounce angle.

For possible adjustments to particular models, please refer to the model page on the website.

- Iron lofts (model dependant) can be adjusted up to 2 degrees stronger than standard (note: making the loft stronger will increase the offset and reduce the bounce angle of the sole).
- No loft or lie adjustments can be made to drivers or fairway woods.

Grips / Grip thickness

- Grips can be thickened with up to 5 layers of tape (Tour Velvet Midsize is equivalent to about 5 tapes).

For any further advice please contact Mizuno.

SPECIFICATION: Breath Thermo heat generating performance

MEN'S SIZES: S, M, ML, L, XL

WOMEN'S SIZES: S, M, ML, L

MATERIALS: 100% Synthetic Leather

MP-X

TOUR PERFORMANCE FOR HIGH SWING SPEEDS

The MP-X has been unveiled to help Mizuno expand its use amongst the next generation of tour players and elite amateurs. The 4 piece construction features a dual core design, that reduces spin from the driver – suited to more powerful ball strikers. A new, thinner 0.5mm urethane cover enhances initial ball speed, while a 330 dimple configuration creates a highly efficient flight.

- COVER - Urethane
- LAYERS - Four
- DIMPLE DESIGN - 330
- COMPRESSSION - Firm

450M8451OP

MP-S

TOUR PERFORMANCE FOR MID SPEED SWINGS

Dubbed 'the ball that loves to spin' on its introduction – the MP-S is Mizuno's softest, most responsive ball. The MP-S features a larger inner core and thinner urethane cover – adding yards to the long game of mid/high swing speeds. The cover thickness is reduced to just 0.5mm, increasing velocity from the tee, while a 330 dimple configuration creates a highly efficient flight.

- COVER - Urethane
- LAYERS - Three
- DIMPLE DESIGN - 330
- COMPRESSSION - Mid

450M8351OP

> "For the majority of tour players and elite level players, we've found the low spin characteristics of the MP-X off the tee, make it more predictable in the long game. Club players who generate a little less spin naturally, will match up better with the MP-S."
>
> Alex Thorne, Head of Tour Operations.

JPX-S

BALANCED PERFORMANCE WITH SOFT FEEL

The new JPX-S is a soft compression edition of Mizuno's 3 piece ball – producing a balanced performance for a wider range of swing speeds. Mizuno's engineers discovered that a softening of the core not only improved the feel of the JPX-S at impact, but also increased initial ball speed for the majority of players.

- COVER - Surlyn
- LAYERS - Three
- DIMPLE DESIGN - 566
- COMPRESSSION - Soft

450M7241OP

BALANCED PERFORMANCE: Speed, feel, aerodynamics and durability enhanced together.

SOFTER COMPRESSION: Creates greater ball speed for the majority of amateur swings.

566 MICRO DIMPLE DESIGNS: Increased hang time past the apex of ball flight.

JPX

THE SOFTER JPX WITH MICRO DIMPLES

The new JPX is Mizuno's softest compression two piece golf ball. A large low compression core keeps the JPX nimble around the greens and quick off the clubface. Mizuno's unique micro-dimple cover maintains the ball's aerodynamics during descent for long stable tee shots.

- COVER - Surlyn
- LAYERS - Two
- DIMPLE DESIGN - 512
- COMPRESSSION - Soft

450M7551OP

LARGE, SOFT COMPRESSION CORE: Combines elevated ball speeds at low and mid swing speeds with an unexpectedly smooth feel.

MULTI BLEND POLYMER COVER: Durability yet soft around the greens.

SUITABLE FOR: Mid to lower swing speeds in dry conditions. All swing speeds in cold, wet conditions.

MICRO DIMPLE DESIGN: Combines elevated ball speeds at low and mid swing speeds with an unexpectedly smooth feel.

The 2018 collection is Mizuno's most extensive yet in colour and style – but again has Mizuno's heat generating Breath Thermo yarn at its heart. "We initially developed Breath Thermo for extreme winter sports – where thinner, less restrictive clothing was a huge advantage. Breath Thermo has a unique ability to generate new heat from trace escaping body vapour – rather than purely insulate." Kate Whitmore, EMEA Golf Product Manager.

BREATH THERMO BIOGEAR BASE LAYER

52G58530

A soft, warming, stretchable base layer – using a heat-generating Breath Thermo yarn developed by Mizuno's fabric engineers for extreme winter sports. Compression fit reduces muscle fatigue.

Reflex Blue Light Grey Black

Built to withstand winter conditions - yet light enough for summer. The Nexlite Spike is an all year round shoe that comes into its own in wet conditions. Our Kuraray upper is a soft touch synthetic that looks and feels like leather to the touch – and waterproof to 20,000mm. Built on a comfortable Wave Technology proven through our award-winning running shoes and incredibly just 285 grams overall.

BOA CLOSURE SYSTEM

Quick dial system closes the shoe evenly, without pressure points. Easily released and tightened. Nylon coated stainless steel wire does not rust or stretch when wet.

20,000MM WATERPROOF UPPER

Our premium soft-touch Kuraray upper is breathable and waterproof to 20,000mm. Complete with a 2-year waterproof warranty

BUILT ON WAVE RUNNING TECHNOLOGY

Mizuno's running shoes are trusted by marathon runners worldwide. We built the Nexlite BOA Spike on the same supportive, cushioned Wave Technology platform – so you can comfortably walk 36 holes and beyond.

ULTRALIGHT COMFORT

The Nexlite BOA Spike packs all its performance into a featherlight 285 grams per shoe. Perfect for all year round use.

IG4 SPIKE SYSTEM

Fast Twist universal spike with quick tightening and release system. With 2 additional spikes and wrench.

MIZUNO WAVE CADENCE GTX

WALK 36 AND BEYOND – WITH GORE-TEX®

The ultimate long distance golf shoe - designed to walk 36 holes and beyond. Based on Mizuno's award-winning running platform, the Wave Cadence blends the comfort and support of a high-end running shoe, with the lateral stability and traction needed for golf. A new GORE-TEX® membrane adds all year versatility with its durable waterproofness and industry leading breathability.

Mizuno's Wave Plate is a one-piece corrugated mechanism that provides both 'active' cushioning and lateral stability. A golf specific configuration within the Wave Cadence maintains all the comfort of a proven running shoe, with the increased lateral security needed on the course. The Silver Tornado spike system means that the Wave Cadence is as secure through the swing as it is on the walks between shots.

BUILT ON WAVE RUNNING TECHNOLOGY

Award-winning cushioning and stability trusted by runners worldwide.

SILVER TORNADO TOUR LOCK SPIKE

Fast Twist universal spike – high traction and easily replaced.

GORE-TEX® WATERPROOF

New breathable membrane is durable and breathable – for all year round versatility. With 2 year waterproof warranty.

X10 CARBON RUBBER SOLE

Extremely durable compound used in high impact areas extends the life of the shoe.
